

SPECTROTEST Mobile Metal Analyzer

Upgrade your SPECTROTEST (TXC35) for Even Faster Readiness on the Spot

- New powerful integrated PC
- Reduced start-up time by a factor of 2
- Multi-language Windows 11 IoT Enterprise 64-bit

The SPECTROTEST mobile spectrometer delivers precise results without compromise when an exact metal analysis is required, materials are difficult to identify, or there is a large number of samples to be tested.

There's no need to compromise when using the SPECTROTEST.

The new integrated 4-core PC significantly reduces the start-up time of the device by a factor of 2.

The computer's large 16 GB RAM also increases the general response speed of software.

Thus, the entire operation of the SPECTROTEST has become more efficient on the spot.

With Windows 11 IoT Enterprise Edition in 64-bit architecture on the SPECTROTEST, not only multilingualism is guaranteed. Thanks to long-term support, you can rely on future-proofing through regular system security updates.

Keep your existing SPECTROTEST (TXC35) up-to-date.

The upgrade is available for the SPECTROTEST model TXC35. Please contact your local SPECTRO subsidiary or regional SPECTRO representative for more information.
